Price: $6.50 · **License:** personal use; sell prints with credit · **Type:** digital download

A honeycomb planter that stacks and clicks together. Start with one cell for your desk and grow it into a wall of succulents.

- Prints without supports on any FDM printer
- Built-in drip tray with a drain gap, so roots don't sit in water
- Cells lock side by side with a dovetail and stack two high

> **What's included:** 2 STL files (pot, tray), a 3MF with a 6-cell plate ready to slice, and a README with settings. This is a digital file; no physical item ships.

02 Printables NO FIXED LIMITS ON FILE; CHECKED BY HAND

03 Print settings

SETTING	VALUE	WHY
Material	PLA indoors, PETG for a sunny window	PLA softens in hot sun
Layer height	0.2 mm	Clean hex walls at a fair speed
Walls / infill	3 walls · 15% gyroid	Watertight tray
Supports	None	45° chamfer on the drain gap
Time / filament	2 h 40 min · 58 g per cell	Bambu A1, 0.4 mm nozzle

04 Pricing SAMPLE FIGURES

SIMILAR MODEL	MARKETPLACE	PRICE	SIGNAL
Geometric succulent pot set	Etsy	$4.99	1,200+ sales
Modular honeycomb shelf	Etsy	$8.00	640 sales
Self-watering hex planter	Printables	Free	3,100 downloads

Sell the 6-cell bundle at $6.50: above single pots, below the shelf systems. Launch at $4.99 for the first two weeks to collect reviews, and keep one cell free on Printables as the way in.

05 Photo shot list

01 **Hero**
Three cells stacked, one with a succulent, on a plain light background, three-quarter view

02 **Scale**
One cell in a hand, so buyers see it's desk-sized

03 **Detail**
Close-up of the dovetail joint and the drain gap in the tray

04 **In use**
A 6-cell wall on a shelf by a window

05 Colors
Green, terracotta and white cells side by side

06 Slicer
Screenshot of the plate showing no supports
